Helicobacter pylori Real Time PCR Detection Kit

Pathogen and product description

H*elicobacter pylori* is a gram-negative microaerophilic spiral-shaped bacterium, which is able to colonize the mucus layer of the human stomach and the upper part of small intestine (duodenum). More than half of the world's population is estimated to be infected with *H. pylori*, but the most individuals are asymptomatic. *H. pylori* is involved in the pathogenesis of atrophic gastritis, gastroduodenal ulcer, gastric cancer and gastric mucosa-associated lymphoid tissue (MALT) lymphoma.

VIASURE *Helicobacter pylori* Real Time PCR Detection Kit is designed for the detection of *Helicobacter pylori* in gastric tissue biopsies. After DNA insolation, the identification of *Helicobacter pylori* is performed by the use of target specific primers and a fluorescent-labeled probe that hybridizes to a conserved region with the *ureB* gene.

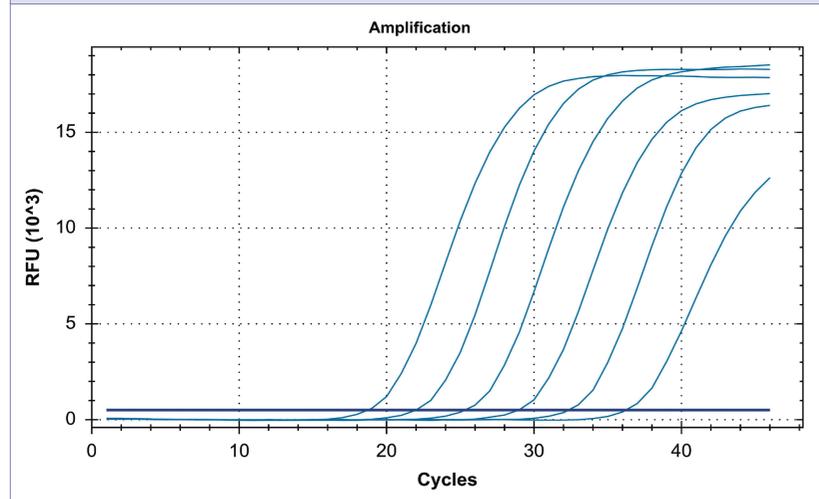

THE REAL ONE STEP qPCR

Analytical sensitivity

VIASURE *Helicobacter pylori* Real Time PCR Detection Kit has a detection limit of ≥ 100 DNA copies per reaction

Dilution series of *Helicobacter pylori* (10^7 - 10^2 copies/rxn) template run on the Bio-Rad CFX96 Touch™ Real-Time PCR Detection System

Work Flow

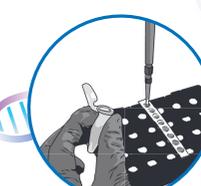

One-step rehydration of wells and add your extracted DNA

STEP 1
Separate the number of required strips you need

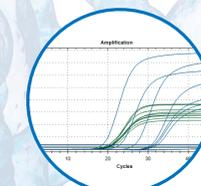

STEP 2
Add 15 μ l of rehydration buffer into each well

STEP 3
Add 5 μ l of DNA sample / positive control / negative control

STEP 4
Load the strips into the thermocycler and run the specified protocol

STEP 5
Interpretate results
