

VIASURE

H1N1 Real Time PCR Detection Kit

Pathogen and product description

Influenza viruses belong to the *Orthomyxoviridae* family and cause the majority of viral lower respiratory tract infections. In 2009, a strain of Influenza A(H1N1) virus containing sequences of avian, swine and human Influenza emerged and spread across the world causing Influenza pandemic. This virus known as A (H1N1)pdm09 virus or (H1N1)v, has been widely circulating across the globe since then, and is now established in human populations as a seasonal Influenza virus.

Influenza A and B are a significant cause of morbidity and mortality worldwide, considering that elderly and compromised individuals are especially at risk of developing severe illness and complications such as pneumonia. After an incubation period of one to two days, the illness has an abrupt onset. People often feel some or all of these symptoms: fever or feeling feverish/chills, cough,

sore throat, nasal stuffiness and discharge, myalgia, headaches and anorexia.

The Influenza viruses can be spread from person to person in two different ways: through the air (large droplets and aerosols from sneezing and coughing), and by direct or indirect contact. Wild waterfowl are believed to be natural reservoir of Influenza A viruses, which can transmit the virus to numerous other species, primarily poultry, pigs and humans.

VIASURE H1N1 Real Time PCR Detection Kit is designed for the diagnosis of Influenza A(H1N1)pdm09 virus. After RNA isolation, the identification of Influenza A(H1N1)pdm09 is performed by the use of target specific primers and a fluorescent-labeled probe that hybridizes to a conserved region with the *hemagglutinin* gene using specific primers and a fluorescent-labeled probe.

Analytical sensitivity

VIASURE H1N1 Real Time PCR Detection Kit has a detection limit of ≥ 50 RNA copies per reaction.

Dilution series of Influenza A ($10^7 - 5 \times 10^1$ copies/rxn) template run on the Bio-Rad CFX96 Touch™ Real-Time PCR Detection System.

Components

| Reagent/Material | Description | Quantity |
|------------------------|--|---------------------|
| H1N1 8-well strips | A mix of enzymes, primers-probes, buffer, dNTPs, stabilizers and Internal control in stabilized format | 6/12 x 8-well strip |
| H1N1 96-well plate | A mix of enzymes, primers-probes, buffer, dNTPs, stabilizers and Internal control in stabilized format | 1 plate |
| Rehydration Buffer | Solution to reconstitute the stabilized product | 1 vial x 1,8 mL |
| H1N1 Positive Control | Non-infectious synthetic lyophilized cDNA | 1 vial |
| Negative Control | Non template control | 1 vial x 1 mL |
| Water RNase/DNase free | Water RNase/DNase free | 1 vial x 1 mL |
| Tear-off 8-cap strips | Optical caps for sealing Wells during thermal cycling | 6/12 x 8-cap strip |
| Shell Frame Grid | Shell Frame Grid | 1 or 2 |

Kit References

| Reference | Description |
